Fibrelite

Large pellet

A complete ration with an enhanced fibre content from beet pulp, soy hulls and alfalfa. Ideal as a partial hay replacer or as a light concentrate for easy keepers.

Features and Benefits

✓ Fibrelite is formulated with **highly digestible fibre** sources including beet pulp, soy hulls and alfalfa meal. Ideally suited for horses on hay restricted diets such as those suffering from allergies, COPD (chronic obstructive pulmonary disease) or in situations where a sufficient supply of hay is unavailable.

✓ Formulated with a moderate energy, high fibre and **low nonstructural carbohydrate** content. Can be used as a light concentrate for easy keepers or as a low NSC option for horses with metabolic issues ie. Equine Metabolic Syndrome, PSSM, or Cushings disease.

✓ **Stabilized flax meal** is a rich source of Omega 3 fatty acids to enrich the hair coat, contribute to hoof health, support the immune system and provide anti-inflammatory support. Stabilized **rice bran** is a very good source of digestible fibre and fat!

✓ A full complement of minerals and vitamins including Brooks **Oxiguard** System of bioavailable Vitamin E and organic selenium work to ensure good health and fitness!

✓ Convenient chunk form is easy to soak for aged horses with poor teeth or horses prone to choke and is dust free for horses with breathing issues.

Fibrelite is a **fixed formula** manufactured in a drug free environment

Fibrelite Description

Fibrelite is an enhanced fibre feed for use as a moderate energy concentrate or as a partial hay replacer. Fibrelite an excellent choice for horses needing a concentrate with a very low sugar and starch level. Fibrelite draws energy primarily from high quality fibre sources without “filler fibres” common in lower quality feeds. The very low non-structural carbohydrate level also makes Fibrelite a good choice for horses diagnosed with *Cushings, Polysaccharide Storage Myopathy, insulin resistance, excitability, or chronic laminitis*. Fibrelite can be used as a partial substitute for hay where sufficient hay is unavailable or must be restricted due to allergies, or Chronic Obstructive Pulmonary Disease.

Fibrelite supplies total nutrition in a palatable chunk form that horses take to readily and stay on while outperforming similar competitive products. *Fibrelite can be conveniently soaked for older horses with poor teeth or horses prone to choke.*

Feeding Suggestions

Feed horses according to level and type of activity and to maintain ideal body condition

Mature Weight	900 lbs. (400 kg.)	1100 lbs. (500 kg.)	1320 lbs. (600 kg.)
Idle horses	3.0 – 5.0 lbs. (1.5 - 2.25 kg.)	4.0 – 6.0 lbs. (2.0 - 2.75 kg.)	5.0 – 8.0 lbs. (2.25 - 3.5 kg.)
Light work	4.0 – 8.0 lbs. (1.8 - 3.6 kg.)	6.0 – 10.0 lbs. (2.75 - 4.5 kg.)	7.0 – 12.0 lbs. (3.2 - 5.5 kg.)

As a hay replacer substitute one to one by weight for hay. Horses with limited hay may show signs of boredom or develop undesirable habits. A minimum of 1% of bodyweight in forage is recommended whenever possible.

Note: Warmblood and Draft type horses may require different amounts from light horse breeds. Contact a Brooks Feed representative or submit a request on our interactive web site.

Amount of feed required is dependent on the body condition, the metabolism and the type of activity the horse is used for. For each pound of *Fibrelite* fed daily below ½ pound per 100 pounds of the horse’s bodyweight add ¼ pound (115 grams) *Brooks Enhancer or All Phase 20*. For specific feeding suggestions consult a Brooks Feed representative or submit a request online using our interactive feeding guide. Provide fresh clean water and free choice salt at all times with a minimum of 1% of the horse’s bodyweight in hay or equivalent pasture. Store in a cool dry location. Amount fed varies according to the quality of hay or pasture. Hay analysis is recommended to ensure a balanced ration.

A list of ingredients and full nutritional analysis is available by contacting the manufacturer
