Phase V Description

Phase V is a fibre and fat based feed suitable for horses competing in a variety of demanding equine disciplines. The low glycemic, controlled NSC (starch & sugar) formula with 8% fat makes Phase V an excellent choice for horses competing in disciplines requiring large amounts of controllable energy. Phase V draws energy primarily from high quality fibre sources without “filler fibres” common in lower quality feeds while the added fat increases the energy level. The controlled NSC formula also helps reduce muscle problems while providing substantial energy for performing, weight gain or training.

Phase V supplies total nutrition in a textured or pelleted form that horses take to readily and stay on during training, competing or pleasure riding while outperforming comparably priced competitive products.

Amount of feed required is dependent on the body condition, the metabolism and the type of activity the horse is used for. For each pound of **Phase V** fed daily below $\frac{1}{2}$ pound per 100 pounds of the horse's bodyweight add $\frac{1}{4}$ pound (115 grams) **Brooks Enhancer or All Phase 20**. For specific recommendations consult a Brooks Feed representative or submit a request online using our interactive feeding guide. Provide fresh clean water and free choice salt at all times with a minimum of 1% of the horse's bodyweight in hay or equivalent pasture. Store in a cool dry location. Amount fed varies according to the quality of hay or pasture. Hay analysis is recommended to ensure a balanced ration.
