Features and Benefits of Phase IV

❖ **Formulated with highly digestible fibre and carefully controlled starch and sugar (NSC) ingredients.**

Rapidly available carbohydrate energy is perfectly blended with the highest quality fibre and fat sources to provide power and speed combined with stamina and response

Balanced vitamin and chelated mineral content

Supplies micronutrient fortification not found in forages and eliminates the need for expensive supplements. Chelated minerals are more readily and thoroughly absorbed for improved health and performance...

Manufactured with a proprietary form of Saccharomyces Cerevisiae a prebiotic with a wide body of research.

The addition of a proprietary yeast culture improves digestion of fibre and promotes more efficient use of nutrients.

Versatile feed with several uses

Useful as a light concentrate for maintenance, for broodmares, light exercise, or for training young horses while maintaining an ideal body condition and a calm attitude.

Formulation is fixed

A fixed formula means that we do not substitute inferior low cost ingredients for superior ingredients to lower the cost of production.

Textured and pelleted Phase IV are formulated with carefully selected ingredients to ensure maximum palatability.

Phase IV Description

Phase IV is a moderate energy, fibre added feed suitable for maintenance, light exercise, open or early gestation broodmares or training young horses. The low glycemic, measured NSC formula makes Phase IV an excellent choice for horses needing a moderate amount of energy. Phase IV draws energy primarily from high quality fibre sources without “filler fibres” common in lower quality feeds. Measured starch and sugar levels reduce excitability making Phase IV a good choice for pleasure horses, open or early gestation broodmares as well as young horses while in training.

Phase IV supplies total nutrition in a palatable textured or pelleted form that horses take to readily and stay on while working on lay up or in training.

Feeding Suggestions

Feed horses according to level and type of activity and to maintain ideal body condition.

Mature Weight	900 lbs. (400 kg.)	1100 lbs. (500 kg.)	1300 lbs. (600 kg.)
Idle horses	3-5 lbs. (1.5-2.5 Kg.)	4-6 lbs. (2.0-2.75 kg.)	5-8 lbs. (2.5-3.5 kg.)
Light work *	4-6 lbs. (2.0-2.75 kg.)	5-6 lbs. (2.5-2.75 kg.)	6-9 lbs. (3.0-4.0 kg.)
Moderate work **	6-9 lbs. (3.0-4.0 kg.)	9-11 lbs. (4.0-5.0 kg.)	11-13 lbs. (5.0-6.0 kg.)
Broodmares idle or early gestation	3-5 lbs. (1.5-2.5 Kg.)	4-6 lbs. (2.0-3.0 kg.)	5-9 lbs. (2.5-4.0 kg.)

* ie. jogging, trail riding, pleasure etc.

** ie. dressage, jumping, cutting, roping etc.

*Note: Warmblood and Draft type horses may require different amounts from light horse breeds.
Contact a Brooks Feed representative or submit a request on our interactive web site.*

Amount of feed required is dependent on the body condition, the metabolism and the type of activity the horse is used for. For each pound of **Phase IV** fed daily below ½ pound per 100 pounds of the horse’s bodyweight add ¼ pound (115 grams) **Brooks Enhancer or All Phase 20**. For specific recommendations consult a Brooks Feed representative or submit a request on-line using our interactive feeding guide. Provide fresh clean water and free choice salt at all times with a minimum of 1% of the horse’s bodyweight in hay or equivalent pasture. Store in a cool dry location. Amount fed varies according to the quality of hay or pasture. Hay analysis is recommended to ensure a balanced ration.

A list of ingredients is available by contacting the manufacturer.
