

“One, my 9 year old Percheron horse had physical characteristics indicated that his diet was inadequate. For example, he had dry cracked hooves, a dull coat, dry brittle mane, with several big knots of horsehair. His skin was dry and he presented a round fat silhouette. About 4 months ago I started using Enhancer and to my delight, this product has greatly changed the health of my horse. His mane, skin and hooves have all improved and his weight is perfect. ”
