TECHNICAL REVIEW SHEET

Micro-Max™

Micronutrient Supplement for Horses

Micro-Max is a low-intake concentrated source of vitamins and minerals for mature horses. Micro-Max is ideal for horses that maintain body weight on diets composed entirely of forage or forage and small amounts of concentrate.

Obesity is a growing problem among horses and ponies, and is related to a number of health concerns, including exercise intolerance, joint problems, and metabolic disorders. In order to keep horses in moderate body weight, they are often given rations with insufficient vitamin and mineral fortification. This is sometimes the case when fortified feeds are fed at levels below their recommended feeding rates.

The use of Micro-Max ensures that all vitamin and mineral requirements of mature horses and ponies are satisfied. Because of its low feeding rate, Micro-Max can be fed by itself or mixed with a concentrate.

Features and Benefits

- Low-intake source of vitamins and minerals
- Includes minerals that have been chelated or proteinated, which increases their digestibility and allows horses to derive maximum benefit from them
- Fulfills the vitamin and mineral requirements of horses and ponies on all-forage diets or that consume less than the recommended daily amount of fortified feeds
- Features yeast culture to enhance digestion of fiber and other nutrients
- Contains natural-source vitamin E
- Pelleted with an alfalfa base for great palatability; soy free

Balance the diet of horses and ponies on forage-only or low-intake rations

Are You Feeding Enough?

If you're feeding less than 5 lb (2.3 kg) of fortified feed per day, your horse's diet may be lacking critical nutrients. Horses on low-intake or all-forage diets should be fed a well-formulated vitamin and mineral supplement to ensure optimal nutrition.

Feeding Recommendations

Feed 120 g per day to horses or 60 g per day to ponies that consume rations consisting of forage only or those consuming forage and unfortified grains. For horses and ponies consuming a fortified feed at less than the recommended daily rate, use this product proportionally (e.g., if a horse is fed half of the recommended feeding rate of a fortified concentrate, feed half of the recommended amount of Micro-Max).

Guaranteed Analysis

Nutrient	per 120g
Calcium	3,000mg
