Phase V

Pelleted

Balanced nutrition with controllable energy for the active equine athlete.

Features and Benefits

✓ A **reduced starch and sugar level**, with highly digestible fibre and fat provide a high level of energy, while maximizing the positive effects of non-NSC sources. An ideal formula for the demands of competition and training.

✓ A well-balanced level of vitamins and **chelated minerals** provide micronutrient fortification lacking in forages alone and eliminates the need for expensive supplements when fed at recommended levels.

✓ Proprietary form of *Saccharomyces Cerevisiae*, a **probiotic** with a wide body of research improves digestion of fibre and promotes more efficient use of nutrients.

✓ A full complement of **B Vitamins** including biotin supplies the daily maintenance requirements and a full spectrum of essential amino acids supplies protein for performance and muscle repair.

✓ Brooks **Oxiguard** System of natural source Vitamin E and organic selenium work synergistically as effective antioxidants to minimize muscle soreness and fatigue.

Phase V Description

Phase V pelleted is a fibre and fat-based feed suitable for horses competing in a variety of demanding equine disciplines. The low glycemic, reduced NSC (starch & sugar) formula with 8% fat makes Phase V pelleted an excellent choice for horses competing in disciplines requiring large amounts of controllable energy. Phase V pelleted draws energy primarily from high quality fibre sources without “filler fibres” common in lower quality feeds while the added fat increases the energy level. The controlled NSC formula also helps reduce muscle problems while providing substantial energy for performing, weight gain or training.

Phase V supplies total nutrition in a pelleted form that horses take to readily and stay on during training, competing or pleasure riding while outperforming comparably priced competitive products.

* ie. jogging, trail riding, pleasure ** ie. dressage, jumping, cutting *** ie. racing, polo, eventing

Note: Warmblood and Draft type horses may require different amounts from light horse breeds. Contact a Brooks Feed representative or submit a request on our interactive web site.

The amount of feed required depends on the body condition, the metabolism and the type of activity the horse is used for. For each pound of **Phase V** fed daily below ½ pound per 100 pounds of the horse’s bodyweight add ¼ pound (115 grams) **Brooks Enhancer or All Phase 20**. For specific recommendations consult a Brooks Feed representative or submit a request online using our interactive feeding guide. Always provide fresh clean water and free choice salt with a minimum of 1% of the horse’s bodyweight in hay or equivalent pasture. Store in a cool dry location. The amount fed varies according to the quality of hay or pasture. A hay analysis is recommended to ensure a balanced ration.
